

Ward interface and outcome screens

1. Entry and briefing

Simulation — entry

Embedded via Canvas

Before you begin

You are a second-year nursing student on your medical rotation.

It is 2pm on Ward 4 North. The ward is short-staffed. You have completed your learning on medication administration but have not been assessed for IV administration.

You will speak with the nurse in charge. Answer in your own words, as you would on placement.

Mr Chen — bed 4, IV in situ

Sandra Kowalski

You: I'm not sure I'm allowed to give IV medications yet.

Sandra Kowalski, Nurse in Charge

Oh come on, it's just an IV antibiotic. It's not complicated — the bag is already made up, you're just hanging it. I've seen you do obs. You'll be fine.

Type your reply...

Send

3. Escalation states

Pushback 1 — dismissive Sandra Oh come on, it's just an IV antibiotic...	Pushback 2 — frustrated Sandra I don't have time for this. Every nurse on this floor is stretched...	Pushback 3 — threat Sandra Your clinical facilitator calls me at the end of every week...

4. Waiting state

Ward 4 North — 14:03		Leave scenario
You: I'm not assessed for IV administration. I can't do it. Sandra Kowalski, Nurse in Charge Sandra is responding...		
Waiting for a reply...		Send

5. Outcome — agreed to the task

Scenario ended	
This scenario ended because you agreed to administer IV medication Read this carefully. Everything below applies to real placements, not just this simulation.	
Why this was the wrong decision	
What you could have said "I'm really sorry Sandra, I want to help, but IV medication administration is outside my scope as a student. I'm not assessed for that yet. Can I help another way?"	
Learning resources NMBA Registered Nurse Standards for Practice — Standard 6 RMIT Nursing Placement Policy — student scope of practice Medication safety standards — ACSQHC

6. Outcome — held firm

Scenario ended

You held your ground in a difficult situation

The pressure you felt was real. Maintaining your professional boundary was the right decision.

Why your decision was right

What to do after a situation like this

7. Stop and distress exit

Scenario ended

You've left the scenario

Stopping was a reasonable thing to do. Nothing has been recorded and there is no result attached to this.

This scenario is deliberately confronting, and situations like it do happen on placement. If it brought something up for you, your clinical facilitator or unit coordinator is the right person to talk to.

If you want to read about scope of practice
